

IKARUS
threat.detection.center

Security management platform for email, web and mobile

The **IKARUS threat.detection.center** is the fastest, easiest and most flexible way to attaining comprehensive security: The platform provides professional protection for emails (incl. advanced threat protection), the web, WiFi and mobile devices. All solutions can be fully customised to fit your brand and design or offered as white label solutions - and additional instances can also be individually designed and provided.

Safe, powerful and highly available

The IKARUS platform is a perfect example of fantastic interaction between powerful hardware, stable software, good air conditioning and a highly available power supply: Altogether, this provides you with complete all-round protection. The platform itself is maintained 24/7, all hardware and software used is cutting-edge and there are database updates several times a day.

Use the **IKARUS threat.detection.center** as a cloud service and leave the setup and maintenance of the hardware and software to IKARUS, while you enjoy fast and uncomplicated access to all services and features via web interface. Or set up your threat detection center on-site, with all hardware, software and data contained within your own four walls. If you choose this option, IKARUS will support you throughout the process by means of special training courses for your help desk and your 2nd level support. In addition, we offer extended analysis support as well as support services for defined error classes.

With the **IKARUS threat.detection.center** in your private cloud, IKARUS takes over maintenance of the platform, leaving you to concentrate on your work undisturbed.
