Installation IKARUS mobile.security

Security for ANDROID devices

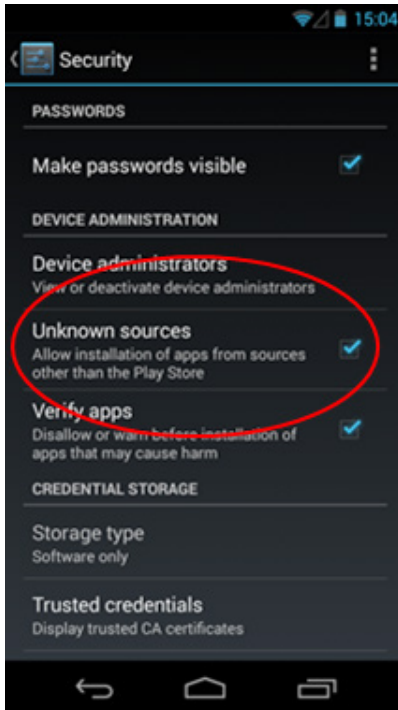

IKARUS mobile.security, the award-winning anti-virus solution for Android devices, proactively protects your smartphone or tablet from malware infections in apps as well as from the Internet. Using exclusively our self-developed technology we are proud to offer a comprehensive solution for your security needs.

Find and remove all kind of malware with no noticeable impact on your battery-life or memory usage. With a full license, you can activate additional features as Theft Protection or Privacy Control.

Additionally, all newly installed or updated apps are being monitored and the USSD blocker prevents the automatic execution of potentially malicious USSD codes.

If your device is lost or stolen, you're able to use the full version theft-protection feature, which is operated via SMS commands. Additionally, the device can be automatically locked when changing the SIM card.

The Privacy Control rates installed apps based on their permissions.

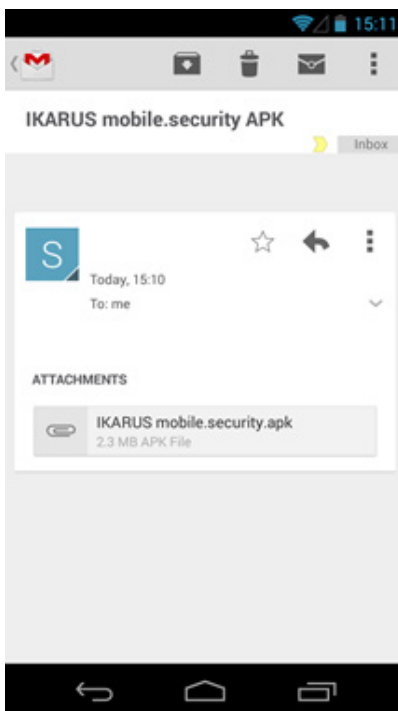

Change the settings of your Smartphone/Tablet to tolerate Non-market-applications (you will find this setting at “Settings” > “Security”, but this can vary).

This setting should be disabled after installing IKARUS mobile.security!

Send the APK-file per e-mail on your smartphone/tablet.

Open the e-mail on your smartphone/tablet.

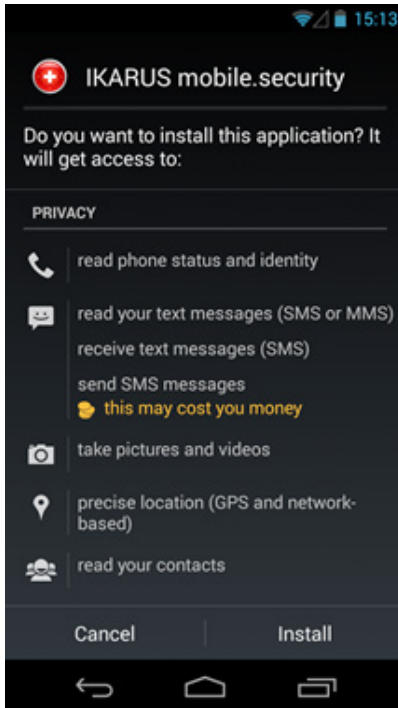

Gmail will recognize the APK-file automatically and will suggest an installation by showing you the right button.

Click the Installation-button.

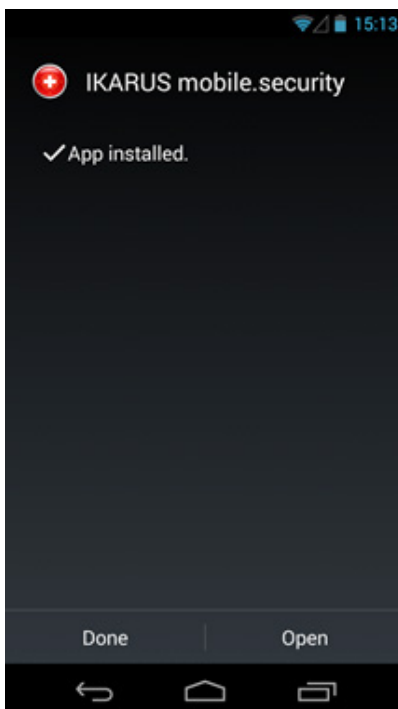

Android will show you a list with all pre-required rights. As a broad Security-App IKARUS mobile.security needs those rights for accomplishing all functions correctly.

For example the anti-theft protection needs the right for using services/texts with costs to find out the correct place via GPS, to get the current Geo-data in case of theft or loss.

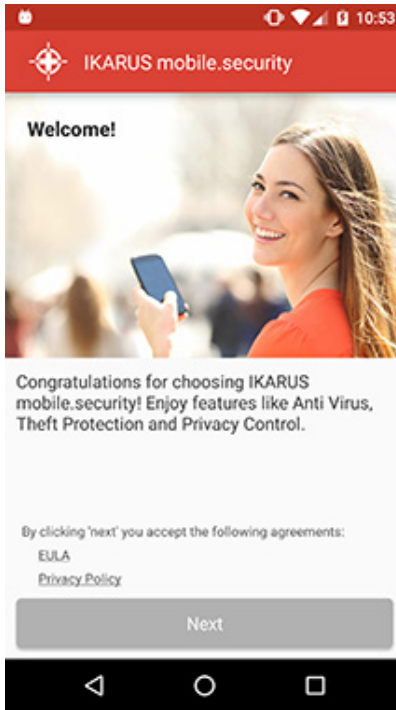

Click “Install”.

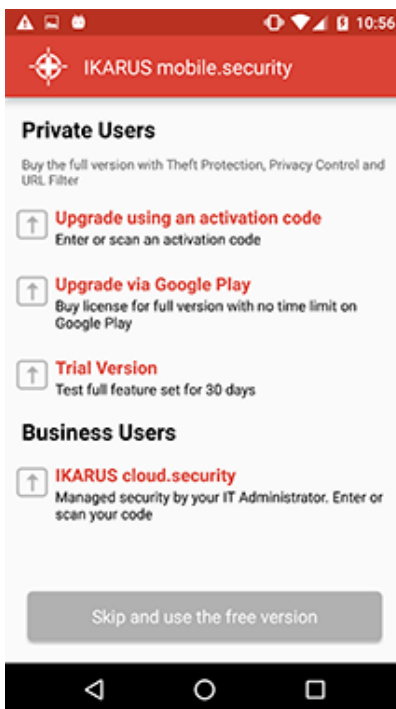

Wait until the installation process is done.

Click “Open”.

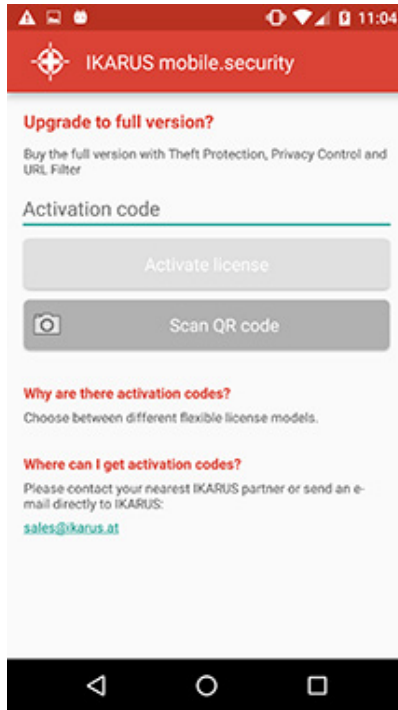

As soon as the installation is finished the IKARUS Security Software-licensing terms will be shown. Read and accept them to continue.

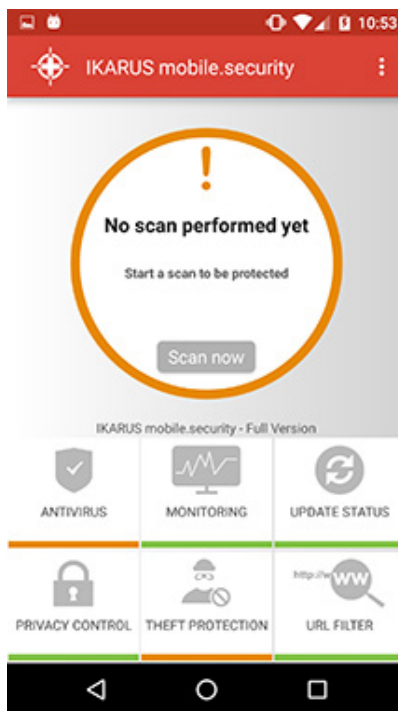

After the download of the virus data base you can choose one of these license models:

- IKARUS mobile.security – version for free
- IKARUS mobile.security – Demo version (for 1 month)
- IKARUS mobile.security – full version (Upgrade with activation code/Google Play)

In case of an upgrade to the full version of IKARUS mobile.security please enter the activation code.

When you are finished with the assistant, IKARUS mobile.security can be used and you can check your mobile device of any infections.
