

**IKARUS**  
**anti.virus**  
anti.spam

## Anti-Malware solution for Windows workstations

Work and surf without worry on your PC or laptop: **IKARUS anti.virus** protects your devices and your personal data against viruses and malware while having no discernible impact on computer performance.

### Stress-free working and surfing

With one of the best scan engines in the world, **IKARUS anti.virus** protects against both known and emerging malware: Files and archives are examined, executed, simulated and monitored as part of a multi-level process, while various analysis procedures detect malicious/undesirable behaviour and harmful features. The viruses are neutralised in quarantine, while at the same time, **IKARUS anti.virus** suggests suitable actions to take regarding the unearthed malware - these actions can be implemented in just one click. In case of uncertainties, files can also be sent directly from quarantine to the **IKARUS** laboratory, where they will be subject to further analysis.

With its premium level of detection performance and professional security features, **IKARUS anti.virus** is optimised for easy and uncomplicated usage and low consumption of resources. Compatible with Windows software for endpoints and servers, it is not only suitable for use with home PCs but is also a great choice for small businesses. Specially designed for those working in the field of business, **IKARUS anti.virus** provides you with the opportunity to secure protection and scan settings with a password. It also lets you monitor Microsoft Sharepoint for viruses and malware by scanning all uploads and downloads for infections.

### Product highlights

Protection against viruses, SPAM and malware

- » Regular incremental updates and routine system scans for optimal protection
- » „Guard“ function for permanent proactive protection against both viruses and SPAM
- » Anti-SPAM feature for Microsoft Outlook
