

Central Anti-Virus-Management in the Cloud

Quick overview of multiple endpoints:
IKARUS anti.virus in the Cloud successfully protects any number of PCs, laptops and servers from viruses, malware and SPAM. An intuitive web interface provides an optimal overview of all devices, updates and threats: perfect for admins and service partners!

Strong detection performance with economical operation

Thanks to its easy installation, optimally pre-configured default settings and an intuitive user-interface, your endpoints can be fully protected with just a few clicks. The „Guard“ feature permanently monitors your devices in the background and blocks threats and PUAs in real time, while the Anti-SPAM module protects against spam emails in Microsoft Outlook. Thanks to automatic updates, automatic scan intervals and a responsive quarantine for harmful or suspicious files you are completely protected - without any effort.

IKARUS anti.virus in the Cloud is optimized for maximum detection and protection performance as well as for easy operation and low resource consumption. Flexible licensing models and easy handling let you respond quickly and easily to changes in your IT structure, regardless of the location of your devices. Take a look at the update status of the program and databases at any time, receive notification of an infection, send suspicious files to the **IKARUS** lab for further analysis and add new licenses in just a few clicks.

Enjoy the security by keeping track of your devices and data anytime, anywhere!
