

IKARUS
mobile.management

Intelligent solution for mobile device management

IKARUS mobile.management is a comprehensive MDM (Mobile Device Management) solution for all mobile devices being used in corporate environments. The particularly flexible cloud service manages and protects smartphones, tablets or even notebooks against threats arising from malware, data loss or unauthorised access.

Protection and monitoring

Employees should be helped in improving their mobility and productivity through the use of laptops and smartphones. At the same time, data security, corporate guidelines and legal framework conditions must be ensured. The balancing act between strict specifications and flexible usage requires an intelligent solution.

IKARUS mobile.management enables the active administration and overview of inventory and database of your mobile systems, while integrating seamlessly into your existing business processes. TUV-tested, inspected in independent audits and developed and hosted exclusively in Europe, our software complies with all European data protection guidelines.
