- » Communication client/server over a definable TCP port
- » Multiple language support

IKARUS security.manager in Detail

IKARUS security.manager simplifies configuration, maintenance and monitoring of all IKARUS anti.virus clients. Set policies for individual users and groups or allow groups to inherit settings.

Additional IKARUS security.manager instances can be managed from one place – useful for branches, numerous locations and Managed Service Providers.

Designed for perfect integration with Microsoft Active Directory, you can easily manage all clients.

Benefit from the convenient overview of the company structure, central quarantine and the central control point of updates and patches without huge system loads from individual client updates. The reporting feature provides a visual overview of network status.
